

Shanghai Metals Market Price Assessment Methodology – Lithium Carbonate (Battery Grade)

SMM Lithium Carbonate (Battery Grade) Spot Price

Last consultation date: 2020/12/28– 2021/1/25

Expiry date: April 20, 2022

Date last updated: February 24, 2021

Catalogue

1. Guidelines to SMM price assessment methodology

2. Guidelines to SMM Lithium Carbonate (Battery Grade) Spot Price

2.1 Definition

2.2 Introduction of price assessment

2.3 Source of raw price data

2.3.1 Collecting from price data submitters

2.3.1.1 Criteria for price data submitters

2.3.1.1.1 Criteria for smelters

2.3.1.1.2 Criteria for traders

2.3.1.1.3 Criteria for downstream users

2.3.1.2 Formation and adjustment of the price submitter list

2.3.1.3 Process of price data collection

2.3.2 Collecting price data from other submitters

2.4 Detailed formation process and related regulations

2.4.1 Data collection

2.4.2 Data normalisation

2.4.3 Information data analysis, verification and screening

2.4.4 Evaluation of published prices (calculation)

2.4.5 Special circumstances

2.4.6 Price publication

2.4.7 Modification of published prices

2.5 Review of key points

2.5.1 Product specification

2.5.2 Major brands and producers

2.5.3 Reference volume

2.5.4 Delivery

2.5.5 Payment terms

2.5.6 Delivery site

2.5.7 Unit of pricing

2.5.8 Format of publishing

2.5.9 Publication time

2.6 Price assessment process

2.7 Adjustment to the price assessment methodology

3. Historical data

4. Compliance with SMM Policies

1. Guidelines to SMM price assessment methodology

Shanghai Metals Market ("SMM") is an independent service provider that does not

participate in trades. SMM is a market observer that engages buyers and sellers in the commodities market. By consulting with industry independent participants, SMM drafts the methodology, examines and revises it regularly based on the specifications and terms of trade that are generally used in the market, with equal weighting given to transactions that meet the standards. SMM reserves the right to exclude any unreliable or unrepresentative price data from its price assessment, in line with this methodology and other related Benchmark governance policies and procedures.

SMM price assessments refer to metals spot prices or price indices of both the Chinese and overseas markets reported by SMM on a daily basis. All SMM prices are published according to a set of defined methodologies, indicating how the prices are accessed and reported. These methodologies are published on our website www.metal.com (English) or www.smm.cn (Chinese) or for all market participants to understand and refer to.

To reflect the actual trades in the spot market, SMM will update the methodology for SMM price assessments and publish all the revisions on our website www.metal.com (English) or www.smm.cn (Chinese) 28 days ahead of the changes. For queries or suggestions on the methodology, please contact SMM customer services (please find contact information on the SMM official websites). Please read this paragraph in conjunction with the SMM methodology review and changes policy, and the SMM Complaint Policy available at www.metal.com (English) or www.smm.cn (Chinese).

This document specifies the standards and management methods for SMM Lithium Carbonate (Battery Grade) Spot Price assessment. These standards are formulated to establish a transparent and verifiable SMM price setting mechanism and provide market participants with an important pricing indicator.

The Committee maintains oversight of the SMM Benchmark methodology and its compilation process, ensuring that SMM prices and indices reflect as closely as possible the objective conditions of physical markets of relevant commodities. The Committee will immediately point out any problem it finds, and propose external consultations and modifications to the existing methodologies or processes, in order to improve the quality of prices or indices published by SMM. The Committee can only propose changes to the methodologies and processes used in future Benchmark assessments, rather than modifying the already published prices or indices.

2. Guidelines to SMM Lithium Carbonate (Battery Grade) Spot Price

2.1 Definition

The SMM Lithium Carbonate (Battery Grade) Spot Price is assessed and reported based on the methodology defined in this document. As a benchmark, it can be referred to by both parties of lithium carbonate (battery grade) spot transaction as their settlement price. The prices reflect the range of the actual traded prices and the most likely to be traded price levels of spot lithium carbonate (battery grade) on a delivery to factory basis at the time of publication on each complete trading day. The prices are mainly based on the spot prices across China in the current day, including relevant expenses in transportation, taxes, capital costs and other relevant trade

expenses.

2.2 Introduction of price assessment

SMM collects data information used to evaluate lithium carbonate (battery grade) spot price by means of standard acquisition (that is, the collection of raw data information that complies with the SMM Data Standards Policy), from including the bid and offer of the buyer and seller that were not traded on the same day, and the actually traded price of spot transaction provided by the price submitters. The amount of each transaction that can be deemed as the standard spot lithium carbonate (battery grade) offers or trades in the price collection will be not less than 30 mt. Data collection, assessment (calculation) and daily management of SMM Lithium Carbonate (Battery Grade) Spot Price are conducted by SMM Operational teams (consists of 2 price analysts and a price manager).

The price published by SMM is intended to reflect the real transactable value of a commodity in a time point or period during the day. As such, where a confirmed deal is done for the same specification and loading range as confirmed bids and offers, and when all are declared to the market simultaneously, the deal will take precedence over the bids and offers. During the assessment process, we may consider other information. However, actual transactions, bids and offers will always take precedence. In the valuation process, consider further different types of enterprises, different types of raw materials, and different transaction quantities, etc., and increase the reference ratio of mainstream enterprises. When the external market environment changes greatly and the transaction volume is small, update the reference ratio of the collection transaction price valuation method, and consider adding the possible lithium carbonate (battery grade) price affecting factors (raw material price, industry comprehensive processing fee, appropriate enterprise profits, buyer and seller bargaining power, etc.) , mainstream companies' judgments on the market's assessed prices, combined with the latest market prices and future price trends.

Please read this paragraph with the SMM Benchmark Guidelines on Hierarchy of Data Inputs available at available at www.metal.com (English) or www.smm.cn (Chinese).
