1. Guidelines to SMM price assessment methodology

2. Guidelines to SMM Nickel Sulfate (Battery Grade) spot price

2.1 Definition

2.2 Introduction of price assessment

2.3 Source of raw price data

2.3.1 Collecting from price data submitters

2.3.1.1 Criteria for price data submitters

2.3.1.1.1 Criteria for smelters

2.3.1.1.2 Criteria for downstream users

2.3.1.2 Formation and adjustment of the price submitter list

2.3.1.3 Process of price data collection

2.3.2 Collecting price data from other submitters

2.4 Detailed formation process and related regulations

2.4.1 Data collection

2.4.2 Data normalisation

2.4.3 Information data analysis, verification and screening

2.4.4 Evaluation of published prices (calculation)

2.4.5 Special circumstances

2.4.6 Price publication

2.4.7 Modification of published prices

2.5 Review of key points

2.5.1 Product specification

2.5.2 Major producers

2.5.3 Reference volume

2.5.4 Delivery

2.5.5 Payment terms

2.5.6 Delivery site

2.5.7 Unit

2.5.8 Form

2.5.9 Publication time

2.6 Price assessment process

2.7 Adjustment to the price assessment methodology

3. Historical data

4. Compliance with SMM Policies

1. Guidelines to SMM price assessment methodology

Shanghai Metals Market ("SMM") is an independent service provider that does not participate in trades. SMM is a market observer that engages buyers and sellers in the commodities market. By consulting with industry independent participants, SMM drafts the methodology, examines and revises it regularly based on the specifications and terms of trade that are generally used in the market, with equal weighting given to transactions that meet the standards. SMM reserves the right to exclude any unreliable or unrepresentative price data from its price assessment, in line with this methodology and other related Benchmark governance policies and procedures.

SMM price assessments refer to metals spot prices or price indices of both the Chinese and overseas markets reported by SMM on a daily basis. All SMM prices are published according to a set of defined methodologies, indicating how the prices are accessed and reported. These methodologies are published on our website www.metal.com (English) or www.smm.cn (Chinese) or for all market participants to understand and refer to.

To reflect the actual trades in the spot market, SMM will update the methodology for SMM price assessments and publish all the revisions on our website www.metal.com (English) or www.smm.cn (Chinese) 28 days ahead of the changes. For queries or suggestions on the methodology, please contact SMM customer services (please find contact information on the SMM official websites). **Please read this paragraph in conjunction with the SMM methodology review and changes policy, and the SMM Complaint Policy available at www.metal.com (English) or www.smm.cn (Chinese).**

This document specifies the standards and management methods for the SMM Nickel Sulfate (Battery Grade) spot price assessment. These standards are formulated to establish a transparent and verifiable SMM price setting mechanism and provide market participants with an important pricing indicator.

The SMM Benchmark Management Committee ("the Committee") will regularly - and no less frequently than annually - review the methodology and its evaluation and publication process. The Committee maintains oversight of the SMM Benchmark methodology and its compilation process, ensuring that SMM prices and indices reflect as closely as possible the objective conditions of physical markets of relevant commodities. The Committee will immediately point out any problem it finds, and propose external consultations and modifications to the existing methodologies or processes, in order to improve the quality of prices or indices published by SMM. The Committee can only propose changes to the methodologies and processes used in future Benchmark assessments, rather than modifying the already published prices or indices.

2. Guidelines to SMM Nickel Sulfate (Battery Grade) spot price

2.1 Definition

The SMM Nickel Sulfate (Battery Grade) (hereinafter referred to as nickel sulfate) spot prices are assessed and reported based on the methodology defined in this document. As a benchmark, it can be referred to by both parties of nickel sulfate spot transaction as their settlement price. The prices are a price range of the most tradable levels of spot nickel sulfate ahead of publication on each complete trading day. The prices are assessed based on trading situation nationwide on the day.

2.2 Introduction of price assessment

SMM collects data information used to evaluate battery-grade nickel sulfate spot prices by means of standard acquisition (that is, the collection of raw data information that complies with the SMM Data Standards Policy), from data providers that have signed agreement with SMM or have not signed agreement with SMM but meet SMM standards. The data include the bids and offers of the buyer and seller that were not traded on the same day, and the actually traded prices of spot transactions submitted by the price providers. The amount of each transaction that can be deemed as the standard nickel sulfate quotes or trades in the price collection will be 100-1,000 mt. Data collection, assessment (calculation) and daily management of SMM nickel sulfate spot prices are conducted by SMM Nickel Operational Team (consists of position A and B as well as a price manager).

The price published by SMM is intended to reflect the real transactable value of a commodity in a time point or period during the day. As such, where a confirmed deal is done for the same specification and loading range as confirmed bids and offers, and when all are declared to the market simultaneously, the deal will take precedence over the bids and offers. During the assessment process, we may consider other information. However, actual transactions (Priority over bids and offers), bids and offers will always take precedence.

Please read this paragraph with the SMM Benchmark Guidelines on Hierarchy of Data Inputs available at www.smm.cn.
